

## smartQCIREADER

**smartQCIREADER** is a software utility designed for use on RFID enabled mobile computers running Microsoft Windows Mobile 5.0 or later. The software is a Microsoft .NET application that allows users to read UHF RFID tags. **smartQCIREADER** also supports the EPC Global GEN 2 standard.

**smartQCIREADER** allows users the ability to select how they would like to view the data. The options include:

Native HEX Format  
(3054372B75F456400000000D)

ASCII Format  
(123456789ABC)

EPC URN Format  
(urn:epc:tag:sgtin-96:2.0903901.512345.13)

**smartREADER** writes all data to a standard ascii comma delimited file and includes a date and time stamp.
